According to our (Global Info Research) latest study, the global Rail Contact Clamp market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A rail contact clamp, also known as a rail contactor or rail clamp, is a device used in railway systems to provide electrical contact between the train and the overhead catenary or third rail. It is specifically used in electrified train systems where the trains rely on continuous electrical power supply to operate. The rail contact clamp consists of a clamping mechanism and electrical contacts. The clamping mechanism is designed to securely attach the clamp to the overhead catenary or third rail, ensuring a reliable electrical connection. The electrical contacts within the clamp establish a connection with the power source, allowing the train to receive the necessary electrical energy for propulsion, lighting, and onboard systems.

According to the data of China Association of Metros, by the end of 2022, 55 cities in mainland China have opened urban rail transit and 308 operating lines. The total length of operating lines is 10287.45 km, ranking first in the world and accounting for 26.2% of the total global mileage. 1080.63 km of new operating lines were added in 2022. By the end of 2022, 545 cities in 78 countries and regions will have opened urban rail transit, with more than 41,386.12 km of operational mileage. Compared to 2021, the total mileage of urban rail transit worldwide would increase by 4,531.92 km, an increase of 11.0%, of which 1,293.45 km of subway mileage, 788.11 km of light rail mileage and 2,450.36 km of tram mileage would increase, accounting for 28.5%, 17.4% and 54.1% of the total increase respectively.
