According to our (Global Info Research) latest study, the global Railway Electrification Systems market size was valued at USD 17490 million in 2023 and is forecast to a readjusted size of USD 19200 million by 2030 with a CAGR of 1.3% during review period.

A railway electrification system supplies electric power to railway trains and trams without an on-board prime mover or local fuel supply. Electric railways use either electric locomotives (hauling passengers or freight in separate cars), electric multiple units (passenger cars with their own motors) or both. Electricity is typically generated in large and relatively efficient generating stations, transmitted to the railway network and distributed to the trains.

China is the largest Railway Electrification Systems market with a market share of nearly 27%.Germany is the second largest market.

The contact lines system has the highest market share, accounting for nearly 70% of the market share.

CREC,CRCC,Siemens,Alstom and Hitachi are the main players in this market.
