According to our (Global Info Research) latest study, the global Railway Power Cables market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Railway power cables are specially designed cables used to transmit electrical power within railway systems. These cables play a crucial role in providing the necessary power for various components of the railway infrastructure, including traction systems, signaling equipment, lighting, and other electrical systems. Railway power cables are designed to withstand the unique demands of railway environments, including high temperatures, vibrations, mechanical stresses, and exposure to chemicals or moisture. They are constructed using robust insulation materials and robust conductors to ensure safe and efficient power transmission.

According to the data of China Association of Metros, by the end of 2022, 55 cities in mainland China have opened urban rail transit and 308 operating lines. The total length of operating lines is 10287.45 km, ranking first in the world and accounting for 26.2% of the total global mileage. 1080.63 km of new operating lines were added in 2022. By the end of 2022, 545 cities in 78 countries and regions will have opened urban rail transit, with more than 41,386.12 km of operational mileage. Compared to 2021, the total mileage of urban rail transit worldwide would increase by 4,531.92 km, an increase of 11.0%, of which 1,293.45 km of subway mileage, 788.11 km of light rail mileage and 2,450.36 km of tram mileage would increase, accounting for 28.5%, 17.4% and 54.1% of the total increase respectively.
