A rain detector is a device used to detect rainwater, usually to monitor the fall and flow of rainwater. These devices can tell if the rain has reached a certain level by detecting rainfall and flow, so that necessary measures can be taken when needed.

Rain detectors typically use sensor technology to monitor rain. These sensors measure parameters such as rainfall, water velocity and water level. When the rainwater reaches a certain water level or flow rate, the detector will send out an alarm or signal to prompt people to take necessary flood control and drainage measures.
