RAIN RFID Antennas are RF antennas designed specifically to support RAIN RFID technology. They are used to enable tag reading and data transmission in ultra-high frequency (UHF, typically in the 860–960 MHz range) passive RFID systems. RAIN RFID is a global standard (following the GS1 EPC UHF Gen2 protocol and ISO/IEC 18000-63) that supports large-scale, high-speed, and long-distance data collection and identification. RAIN RFID antennas collaborate with RFID readers to generate electromagnetic waves to activate tags and receive return signals. They are widely used in supply chain management, warehousing and logistics, retail anti-theft, medical asset tracking, smart manufacturing and other scenarios. Depending on the application scenario, RAIN RFID antennas can be divided into two types: far-field and near-field. Their deployment continues to grow worldwide, promoting the realization of end-to-end IoT information visualization and intelligence.
