Abstracts

The global Rainscreen Cladding market size is expected to reach \$ million by 2032, rising at a market growth of %CAGR during the forecast period (2026-2032).

A rainscreen is an exterior wall detail where the siding (wall cladding) stands off from the moisture-resistant surface of an air barrier applied to the sheathing (sheeting) to create a capillary break and to allow drainage and evaporation. The rain screen is the siding itself but the term rainscreen implies a system of building. Ideally the rain screen prevents the wall air/moisture barrier on sheathing from getting wet.
