According to our (Global Info Research) latest study, the global Raking Screen market size was valued at US\$ 93.29 million in 2025 and is forecast to a readjusted size of US\$ 166 million by 2032 with a CAGR of 5.8% during review period.

In 2025, global Raking Screen approximately 25,020 units, with an average global market price of around US\$ 3624 per unit. Gross margin is about 49%. The cost is 1,848 usd. The Production is about 29,000 units. Raking Screen is a wastewater pretreatment device installed at the inlet of sewage treatment plants, pumping stations, or water intake structures to automatically remove large solid debris from flowing water. It consists of a bar rack (screen bars), a mechanical raking or cleaning mechanism, drive unit, and discharge system, which together capture and lift materials such as plastics, rags, leaves, and other coarse solids out of the wastewater stream. Upstream, the equipment depends on stainless steel screen bars, chains or rake arms, motors, gearboxes, and control panels; midstream manufacturers perform hydraulic design, fabrication, and integration into channels or chambers; downstream, it is widely applied in municipal wastewater plants, industrial pretreatment facilities, and drainage or intake protection systems, where it protects pumps and downstream treatment processes from clogging and damage.
