Abstracts

The global Ranunculus Ternatus Extract market size is expected to reach \$ 73.43 million by 2032, rising at a market growth of 7.1% CAGR during the forecast period (2026-2032).

In 2024, the global production of Ranunculus Ternatus Extract is approximately 800 tons, with an average selling price of about US\$55 per kilogram. The production capacity in 2024 is 1120 tons, with an average gross profit margin of approximately 20-30%. Ranunculus Ternatus Extract is extracted from the dried rhizomes of Ranunculus ternatus, a plant belonging to the Ranunculaceae family. Its main components include lactones, sterols, unsaturated fatty acids, trace elements, polysaccharides, flavonoids, glycosides, amino acids, and volatile oils. It has the effects of clearing heat and detoxifying, reducing swelling and dispelling lumps, and relieving cough and phlegm. It is often used to treat scrofula, carbuncles, boils, and snake and insect bites.

The upstream of the Ranunculus Ternatus Extract industry chain is centered on wild or semi-wild dried rhizomes of Ranunculus ternatus as the core raw material. Its supply, collection costs, and quality stability are directly constrained by the ecological environment and harvesting regulations of the production area. Downstream applications are highly concentrated in high-value-added fields, mainly including the pharmaceutical industry (used in adjuvant anti-tumor drugs and immunomodulatory traditional Chinese medicine preparations), the high-end health products and dietary supplements industry (as a functional ingredient for enhancing immunity and anti-inflammatory effects), and the functional cosmetics industry (used in repairing and soothing skincare products). Market demand is closely linked to the upgrading of global health consumption and the recognition of the efficacy of natural herbal remedies. The market for Ranunculus Ternatus Extract has shown a growing trend in recent years, driven by the increasing demand for natural plant extracts and botanical

medicines. *Ranunculus Ternatus*, as a traditional herbal plant, is widely used in health supplements, functional foods, cosmetics, and traditional Chinese medicine preparations due to its various pharmacological effects, including antioxidant, anti-inflammatory, and immune-enhancing properties. The demand for cat's claw extract is continuously rising, particularly in health areas such as immune regulation, anti-tumor, and antiviral applications.

In terms of market applications, *Ranunculus Ternatus* Extract is primarily used in functional foods and nutritional supplements, especially favored in immune-boosting, anti-fatigue, anti-inflammatory, and anti-aging products. Furthermore, due to its antioxidant properties, cat's claw extract is also widely used in skincare and cosmetics to improve skin health and delay aging. With increasing consumer health awareness and a preference for natural, side-effect-free products, the application scope of cat's claw extract is continuously expanding in the global market.

Regionally, North America and Europe are the main consumer markets for *Ranunculus Ternatus* Extract, with particularly significant growth in demand in the health supplement and functional food sectors. The Asia-Pacific region, especially China and India, is expected to become the fastest-growing market for cat's claw extract, benefiting from the influence of traditional Chinese medicine culture.
