RAP cool containers are a large-sized type of ULD cooling containers that can be loaded onto aircrafts as a whole, reducing transportation risks. They are typically cooled using dry ice or compressor refrigeration and equipped with temperature control systems. Specifically designed to maintain stable temperatures for goods during transportation, they can maintain the set temperature throughout the entire journey and record measurement data, making them suitable for use on various aircrafts. RAP refrigerated containers are commonly used for transporting goods that require specific temperature conditions, such as perishable foods, pharmaceutical products, biological samples, and more.
