Abstracts

The global Rare Earth Carbonate market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Rare earth carbonate is a compound containing a mixture of rare earth elements and carbonate. Rare earth elements are a group of 17 chemically similar elements, including lanthanum, cerium, neodymium and europium. The concentration of these elements in the crust is usually very low, so it is difficult and expensive to extract them. Rare earth carbonates are often used as raw materials for the production of rare earth metals, alloys and magnets for various high-tech applications, including electric vehicles, wind turbines and smart phones. Carbonate is formed by chemical reaction between rare earth elements and carbon dioxide, forming white or light-colored powder, highly soluble in water.

This report studies the global Rare Earth Carbonate production, demand, key manufacturers, and key regions.
