Rare earth permanent magnet motor is a new type of permanent magnet motor that appeared in the early 1970s. Due to the high magnetic energy product and high coercivity (especially high intrinsic coercivity) of rare earth permanent magnets, rare earth permanent magnet motors have small size, It has a series of advantages such as light weight, high efficiency and good characteristics.

According to our (Global Info Research) latest study, the global Rare Earth Permanent Magnet Motor market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Rare earth permanent magnet motor is a new type of permanent magnet motor that appeared in the early 1970s. Due to the high magnetic energy product and high coercivity (especially high intrinsic coercivity) of rare earth permanent magnets, rare earth permanent magnet motors have small size, It has a series of advantages such as light weight, high efficiency and good characteristics.

Due to the excellent magnetic properties of rare earth permanent magnet materials, it can build a strong permanent magnetic field without additional energy after magnetization. The rare earth permanent magnet motor made by replacing the electric excitation field of traditional motors is not only efficient, but also Simple structure, reliable operation, small size and light weight. It can not only achieve high performance (such as ultra-high efficiency, ultra-high speed, ultra-high response speed) unmatched by traditional electric excitation motors, but also can be made into special motors that

can meet specific operating requirements, such as elevator traction motors, automotive motors, etc. . The combination of rare earth permanent magnet motor and power electronic technology and microcomputer control technology has improved the performance of the motor and transmission system to a new level. Therefore, improving the performance and level of the supporting technical equipment is an important development direction for the motor industry to adjust the industrial structure.
