## Abstracts

According to our (Global Info Research) latest study, the global Rare Earth Permanent Magnetic Components market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Rare earth permanent magnet components are high-performance permanent magnet materials made of rare earth metals and other metal materials, and are widely used in electronics, machinery, energy and other fields. Since rare earth materials have the advantages of high magnetic energy product, high temperature resistance, and corrosion resistance, these components can provide strong magnetic force in a small volume and are suitable for use in equipment that requires high magnetic fields and high efficiency. The main types include neodymium iron boron magnets (NdFeB) and samarium cobalt magnets (SmCo). The former has strong magnetism but slightly poor temperature resistance, while the latter is suitable for high temperature environments.
