Abstracts

Rare gases are also known as noble gases. They are odorless and colorless monatomic gases with low chemical reactivity. The noble gases that occur naturally are helium (He), neon (Ne), argon (Ar), krypton (Kr), xenon (Xe), and the radioactive radon (Rn). The noble gases are the members of the group 18 of the periodic table. They are typically unreactive except when under extreme conditions. The inertness of noble gases makes them suitable for several applications.
