According to our (Global Info Research) latest study, the global RAS-based Aquaculture market size was valued at USD 2899.1 million in 2022 and is forecast to a readjusted size of USD 7290.3 million by 2029 with a CAGR of 14.1% during review period.

RAS-based Aquaculture is a type of land-based aquaculture based on RAS technology utilized to raise a variety of aquaculture species, including Atlantic salmon, in a highly controlled environment. RAS technology offers the ability to effectively capture and repurpose wastes—reducing environmental impact—to enhance biosecurity to prevent fish escapement, minimize pathogen entry or release to the surrounding environment, and highly control the rearing environment for increased fish performance and welfare. It also increases flexibility in site selection for proximity to markets. Farming fish locally to the market improves sales, reduces transportation costs, requires a smaller carbon footprint, improves traceability and product freshness, and supports the economy in local communities.

In the global market, the key players of RAS-based aquaculture are mainly Pure Salmon, Atlantic Sapphire, Aquabounty, ect. The top five companies in the industry hold less than 2% of the market share. North America, Europe, and China are the major manufacturing regions for this product, with Europe and China together accounting for approximately 50% of the global market share. The product can be categorised into marine aquaculture and freshwater aquaculture based on the method of cultivation. Cultured products can be sold in the food service or retail sector.
