According to our (Global Info Research) latest study, the global Rawinsonde market size was valued at USD 117.5 million in 2023 and is forecast to a readjusted size of USD 187.3 million by 2030 with a CAGR of 6.9% during review period.

Radiosondes are battery-powered telemetry instrument packages that are carried into the atmosphere typically by a weather balloon; they measure altitude, pressure, temperature, relative humidity, wind (both speed and direction), and cosmic ray readings at high altitudes. A class of radiosonde whose position is tracked as it ascends in the atmosphere to give wind speed and direction is referred to as rawinsonde, which is an abbreviation for radar wind sonde. Another class of radiosondes are the ones that are released from airplanes and fall rather than being carried by weather balloons. This class of radiosondes are referred to as dropsondes. Radiosondes play a vital part in most forms of operational atmospheric data assimilation.

Vaisala and Lockheed Martin are the top 2 players of Rawinsonde, with about 64% market shares.
