Abstracts

According to our (Global Info Research) latest study, the global RDL AOI Equipment market size was valued at US\$ 952 million in 2025 and is forecast to a readjusted size of US\$ 1741 million by 2032 with a CAGR of 8.4% during review period.

RDL AOI equipment is a key quality monitoring tool used in advanced packaging. In advanced packaging processes such as wafer-level packaging (WLP), fan-out packaging (FOWLP/FOPLP), and 2.5D/3D silicon/glass interposers, the high-density redistribution layer (RDL) is the core structure for achieving electrical interconnection between chips, and its process yield directly affects the performance and reliability of the final product. As the linewidth of copper RDL continues to shrink to 2/2 micrometers and below, problems such as substrate warping caused by multilayer material stacking, copper grain noise, and the massive amount of data generated by high-resolution scanning make it difficult for traditional inspection methods to achieve both high efficiency and high precision. Therefore, RDL AOI equipment has become an indispensable process control tool for production lines. With a gross profit margin of approximately 60%.
