Abstracts

The global Reactive Brilliant Blue KN-R market size is expected to reach \$ 240 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

In 2025, global Reactive Brilliant Blue KN-R production reached approximately 9,800 tons, with an average global market price of around US\$16.2 per kilogram. Reactive brilliant blue KN-R (C.I.Reactive Blue 19) is a typical anthraquinone dye, its composition is very stable and corrosion-resistant, and due to the existence of benzene ring, it has the ability to cause cancer

Reactive Brilliant Blue KN-R is a mature but still strategically relevant anthraquinone reactive dye. Its market growth is not driven by rapid new application creation, but by steady demand from cellulosic fiber dyeing, its role as a blue component in established reactive dyeing systems, and the increasing importance of compliant and stable supply. Demand is mainly linked to cotton, viscose and blended fabric dyeing and printing. As the textile dyeing industry has moved into a slower-growth phase, volume growth is expected to be modest and mainly supported by Asian textile processing capacity, recovery in export orders, and the gradual exit of low-compliance suppliers. On the pricing side, ASP is sensitive to intermediates, energy, environmental treatment cost, salt control and inventory cycles. Short-term price recovery or regional mismatch may occur, but long-term price upside remains constrained by the mature nature of the reactive dye system and alternative blue dye options.

This report studies the global Reactive Brilliant Blue KN-R production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Reactive Brilliant Blue KN-R and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year.
