According to our (Global Info Research) latest study, the global Reactive Diluents market size was valued at USD 788.1 million in 2023 and is forecast to a readjusted size of USD 967.1 million by 2030 with a CAGR of 3.0% during review period.

Reactive diluents are substances which reduce the viscosity of a lacquer for processing and become part of the lacquer during its subsequent curing via copolymerization. Diluents (or thinners) are usually added to lacquers to reduce their viscosity (they are used to adjust the rheology).

The aliphatic type is projected to be the largest and fastest-growing segment of the market during the forecast period, in terms of both value and volume. The growth in the use of aliphatic reactive diluents is due to their wide use in almost all the end-use industries. Moreover, low raw material cost and easy production process also fuels the demand for aliphatic reactive diluents, globally.
