## Abstracts

Reactive diluents are substances which reduce the viscosity of a lacquer for processing and become part of the lacquer during its subsequent curing via copolymerization. Diluents (or thinners) are usually added to lacquers to reduce their viscosity (they are used to adjust the rheology).

### SCOPE OF THE REPORT:

This report focuses on the Reactive Diluents in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The aliphatic type is projected to be the largest and fastest-growing segment of the market during the forecast period, in terms of both value and volume. The growth in the use of aliphatic reactive diluents is due to their wide use in almost all the end-use industries. Moreover, low raw material cost and easy production process also fuels the demand for aliphatic reactive diluents, globally.

The paints & coatings segment is projected to be the largest application segment of reactive diluents during the forecast period, in terms of both value and volume, owing to the rapid urbanization and growing population. This is also mainly due to the number of projects being commissioned and tendered in various emerging countries.

The worldwide market for Reactive Diluents is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
