According to our (Global Info Research) latest study, the global Real-Time Digital Simulation System?RTDS? market size was valued at US\$ 696 million in 2025 and is forecast to a readjusted size of US\$ 1046 million by 2032 with a CAGR of 6.1% during review period.

To address the challenges of traditional offline power system simulations?the inability to accurately simulate real-time dynamic processes and the inability to perform closed-loop testing with real physical devices?real-time digital simulation systems have emerged. Since breakthroughs and applications in this technology at the end of the 20th century, the field of power system simulation and testing has undergone profound changes. Currently, real-time digital simulation systems have evolved into key technologies integrating high-performance real-time computing platforms, accurate power component model libraries, and rich physical interfaces. They are widely used in power equipment R&D and testing, power grid operation characteristic analysis, protection and control strategy verification, and professional training, significantly improving system safety and reliability, shortening R&D cycles, and reducing actual testing risks.

As power systems continue to expand in size and complexity, the demand for simulation technology continues to grow. As a high-performance real-time digital simulation system, RTDS plays an important role in the fields of power system planning, design, operation and control. Therefore, the RTDS market size has shown a steady growth trend in recent years. In addition, RTDS was initially mainly used for power system simulation, but in recent years its application fields have been continuously expanded. For example, RTDS has been successfully used in power electronics, new energy,

smart grid and other fields. In general, real-time digital simulation system (RTDS) has broad market prospects and application prospects in the field of power system simulation.
