A Footfall Counter is an electronic device that is used to measure the number of people traversing a certain passage or entrance. Examples include simple manual clickers, infrared beams, thermal imaging systems, WiFi trackers and video counters using advanced machine learning algorithms. They are commonly used by retail establishments to judge the effectiveness of marketing campaigns, building design and layout, and the popularity of particular brands.

Market Growth Drivers: The market for real-time footfall counting and analysis systems is driven by the increasing emphasis on customer experience, optimization of store layouts, and the need for data-driven decision-making in various industries.

Technology: These systems use a variety of technologies to count and track people, including sensors, cameras, thermal imaging, WiFi tracking, and Bluetooth beacons. The data collected is then processed to provide real-time and historical insights into foot traffic patterns.

Cloud-Based Solutions: Cloud-based platforms have become popular for real-time footfall counting analysis systems, allowing businesses to access data remotely, scale the solution easily, and analyze data across multiple locations.
