## Abstracts

According to our (Global Info Research) latest study, the global Real-time Radiation Dosimeter market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Real-time Radiation Dosimeter is a radiation monitoring device widely used to measure the radiation dose received by an individual or the environment. Radiation dosimeters utilize certain materials that absorb energy after exposure to radiation and store it in a physically measurable electronic excited state. When these materials are heated, the stored energy is released as light, the intensity of which is proportional to the radiation dose received.
