## Abstracts

According to our (Global Info Research) latest study, the global Real-time Testing and Simulation Software market size was valued at US\$ 377 million in 2024 and is forecast to a readjusted size of USD 526 million by 2031 with a CAGR of 4.8% during review period.

Real-time testing and simulation software are tools used to verify system performance, functionality, and reliability. They ensure the correctness and efficiency of the system in actual operation by simulating real environments or real-time data interactions. Real-time testing is to test systems or components at real time scales to verify their responsiveness in dynamic environments. Simulation software simulates system behavior through mathematical or physical models to predict its performance under different conditions. Real-time testing and simulation software can achieve the functions of both.
