The global Real-time Wastewater Monitoring System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Real-time Wastewater Monitoring System is a packaged system composed of measuring sensors, one control panel and one communication unit to monitor the wastewater quality such as COD, TSS, temperature, etc. and flow rate. The sensors can be customized according to the client's needs. Clients can monitor the parameters from their PCs and smartphones through the cloud-server on a real-time basis, and if the wastewater quality exceeds the pre-set values, clients will receive an alert immediately so that they can stop the operation of wastewater treatment plants or discharge of effluents until the issue is solved. This system will help realize the suitable wastewater management for the clients.
