## Abstracts

The global Realtime Power Factor Corrector market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Realtime Power Factor Correctors are widely used in industrial and commercial applications to achieve power factor correction, comply with energy efficiency regulations, and reduce electricity costs. By maintaining a near-unity power factor, the overall power system becomes more efficient, leading to reduced energy consumption, improved voltage regulation, and reduced stress on electrical equipment.

A Realtime Power Factor Corrector (PFC) is an electronic device used in power distribution systems to improve the power factor of electrical loads in real-time. The power factor is a measure of how efficiently electrical power is being utilized in a system. It is the ratio of real power (in kilowatts or watts) to apparent power (in kilovolt-amperes or volt-amperes) and is expressed as a value between 0 and 1.
