## Abstracts

According to our (Global Info Research) latest study, the global Rebar Cutting and Bending Machines market size was valued at US\$ 1752 million in 2025 and is forecast to a readjusted size of US\$ 2505 million by 2032 with a CAGR of 5.2% during review period.

Rebar cutting and bending machines are construction equipment designed to process reinforcing steel bars by cutting them to length and bending them into specified shapes required for concrete reinforcement. These machines are widely used on construction sites, in rebar fabrication yards, and in precast concrete plants to improve processing efficiency, accuracy, and labor safety. From a value chain perspective, upstream activities include steel frames, electric motors, hydraulic systems, control components, and cutting and bending tools, midstream processes focus on machine manufacturing, assembly, testing, and customization for bar diameter ranges, while downstream demand is driven by construction contractors, infrastructure projects, precast concrete manufacturers, and rebar processing centers. In 2025, the average selling price of rebar cutting and bending machines is approximately US\$9,200 per unit, with global sales volume reaching around 185 thousand units. The industry maintains a gross margin of 25%–40%, supported by steady construction demand, equipment replacement cycles, and increasing adoption of mechanized rebar processing.
