Rebar Starters are steel reinforcement components used in construction to provide a secure connection between new concrete structures and existing ones. These steel bars or rods are typically embedded in the foundation, walls, or slabs of a building during the construction phase to ensure that newly placed reinforcement bars (rebars) can be securely tied into the existing structure. Rebar starters are essential for enhancing the stability and integrity of the overall construction, especially in projects that require reinforcement continuity between different parts of a building or between old and new structures. They are commonly used in residential, commercial, and civil engineering projects like bridges, tunnels, and high-rise buildings.
