## Abstracts

According to our (Global Info Research) latest study, the global Recessed Filter Presses market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Recessed Filter Presses have a recess in each plate with beveled edges where the filter cake forms within this recess of the chamber. Recessed Filter is a solid plate made of plastic, metal, etc. These plates have recessed surfaces, except for the peripheral surface, which allows the plates to seal against each other when hydraulic rams are used to clamp the plates together. When the plates are held tightly together, all dewatering is done by squeezing through the slurry feed pump. Recessed Filter Presses are widely used in solid-liquid separation processes in chemical, food, metallurgical and other industries. It can handle many types of solid-liquid mixtures, such as suspensions, sludges, slurries, etc., and achieve solid dehydration and liquid clarification.
