## Abstracts

According to our (Global Info Research) latest study, the global Rechargeable Handheld Metal Detector market size was valued at USD 504.4 million in 2022 and is forecast to a readjusted size of USD 726.9 million by 2029 with a CAGR of 5.4% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Rechargeable handheld metal detector is an instrument for imaging objects, which is a non-contact security inspection principle for inspection in the form of images. Irradiate the object with X-rays of a certain energy, collect the X-rays scattered and returned from the surface of the object, and perform statistical analysis to obtain images of the surface of the object, as well as various contraband (such as guns, knives, explosives, etc.) that are carried and hidden under the object. substances, drugs, etc.), will be displayed on the image. Those substances with a higher atomic number than the surface object (such as metals, ceramics, etc.) will appear on the image as darker images, and those substances with a lower atomic number than the surface (such as explosives, drugs, etc.) will appear on the image as lighter The images show that this enables a non-contact inspection of what is carried inside the object.
