Abstracts

A Reciprocating Air Compressor is a positive displacement compressor that uses a crankshaft-driven piston and cylinder to compress the air.

According to our (Global Info Research) latest study, the global Reciprocating Air Compressor market size was valued at USD 4479.5 million in 2022 and is forecast to a readjusted size of USD 5496.8 million by 2029 with a CAGR of 3.0% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

According to the technology, it can be divided to single stage air compressors and two stage air compressors. A single-stage reciprocating piston compressor works by drawing the air into the cylinder where it is compressed in a single piston stroke of approximately 120 PSI and then sent to a storage tank. A two-stage compressor includes an additional step where the air is compressed by a second, smaller piston to a pressure of up to 175 PSI.
