Abstracts

According to our (Global Info Research) latest study, the global Reciprocating Scraped Plate Heat Exchanger market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The scraper type heat exchanger is a heat exchanger that uses a scraper to stir the material liquid and clean the heat transfer surface to speed up the heat transfer efficiency. The scraper type heat exchanger is not only suitable for low viscosity material liquids, but is especially suitable for rapid exchange of high viscosity or particle-containing material liquids. hot. Due to the high viscosity or slow flow of high-viscosity liquids, coking films are likely to form on the heat transfer surface of general heat exchangers during ultra-high temperature sterilization, so scraper heat exchangers are most suitable. In the production of aseptic packaged foods such as dairy products, tomato sauce, soy milk and juice, several scraper heat exchangers are often connected in series, and a gun feed pump continuously passes the feed liquid through the heat exchanger for preheating, sterilization and cooling, and then without Bacteria packaging.
