Abstracts

According to our (Global Info Research) latest study, the global Reciprocating Screw Injection Molding Machine market size was valued at US\$ 4116 million in 2025 and is forecast to a readjusted size of US\$ 5551 million by 2032 with a CAGR of 4.4% during review period.

Reciprocating screw injection molding machine is developed to address the industry bottlenecks of low production efficiency, poor plasticizing quality, and difficulty in molding complex and precision plastic parts using traditional injection molding methods. Through an integrated screw design that combines plasticizing, metering, and injection, it achieves more uniform preparation of the plastic melt, more precise metering, and more efficient injection molding, meeting the demands of modern industry for large-scale, high-quality, and automated plastic product production. The demand for reciprocating screw injection molding machines stems from the manufacturing industry's need for large-scale production of high-efficiency, high-quality, and high-precision plastic products. Its development is directly driven by the performance and consistency requirements of complex plastic parts from industries such as automotive, consumer electronics, medical devices, and packaging. The upstream supply chain mainly includes core component suppliers (such as precision screw/barrel, servo motor, hydraulic system, and control system manufacturers) and raw material suppliers (special steel, electronic components, hydraulic oil, etc.). The downstream supply chain covers a wide range of application areas: plastic product processing plants are the direct customers, and their produced parts or finished products flow to end industries such as automotive, home appliances, 3C products, and daily necessities. In 2025, the production volume of reciprocating screw injection molding machines will be approximately 100,000 units, with an average price of approximately US\$40,000 per

unit, a gross profit margin of approximately 35%, and a single-line capacity of 1,000 units per year.
