Abstracts

According to our (Global Info Research) latest study, the global Recirculating Aquaculture System market size was valued at USD 5107.7 million in 2023 and is forecast to a readjusted size of USD 8651.4 million by 2030 with a CAGR of 7.8% during review period.

Recirculating Aquaculture Systems (RAS) allow fish to be farmed in net cages or tanks instead of open-air ponds. These systems allow high-density fish production within a breeding environment that is controllable by the operator of the facility. The filters of the recirculating system clean and recycle the water, sending it back to the tanks. New water is only added to the tanks to compensate for water lost due to splashing and evaporation, and to replace that used to remove waste materials. Recirculating systems can be used to produce both fresh- and saltwater species, including rainbow trout, salmon, catfish, whiteleg shrimp, eel, turbot etc.

Global key players of recirculating aquaculture system include Skretting, Xylem, RADAQUA, PR Aqua, AquaMaof, etc. The top five players hold a share over 10%. In terms of product type, closed type is the largest segment, occupied for a share of 85%, and in terms of application, indoor system has a share about 70 percent.
