According to our (Global Info Research) latest study, the global Recirculating Ball (RCB) Steering Gear market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The recirculating ball steering gear is mainly composed of screw, nut, steering gear housing and many small steel balls. The so-called circulating ball refers to these small steel balls, which are placed in the closed pipeline between the nut and the screw rod. , to transform the sliding friction between the nut and the screw into rolling friction with less resistance. When the screw fixed to the steering column rotates, the screw pushes the nut to move up and down, and the nut drives the steering through the gear The rocker arm swings back and forth to achieve steering. During this process, those small steel balls roll back and forth in the closed pipeline, so this kind of steering gear is called a circulating ball steering gear.
