According to our (Global Info Research) latest study, the global Recombinant Antihemophilic Factor market size was valued at USD 2214.3 million in 2023 and is forecast to a readjusted size of USD 3032.3 million by 2030 with a CAGR of 4.6% during review period.

Recombinant antihemophilic factor works by temporarily raising levels of factor VIII in the blood to aid in clotting.

The market for recombinant antihemophilic factor has witnessed significant growth in recent years. This can be attributed to several factors, including the increasing prevalence of hemophilia, advancements in recombinant DNA technology, and improved access to healthcare services. Hemophilia is a genetic bleeding disorder that requires lifelong treatment with antihemophilic factors, such as factor VIII or factor IX. Recombinant antihemophilic factor, produced using recombinant DNA technology, offers advantages over plasma-derived products, including enhanced safety, reduced risk of infection transmission, and increased supply stability.
