According to our (Global Info Research) latest study, the global Recombinant Hamster Ovary Cell (CHO) Hepatitis B Vaccine market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Hepatitis B is a viral infection caused due to transmission of the virus through contact with the blood or other body fluids of an infected person. It is considered as a serious occupational hazard for healthcare professionals, which affects the liver, causing acute and chronic diseases. Hence, Chinese hamster ovary cell (CHO) hepatitis B vaccine is considered to be the safe and effective method to prevent the hepatitis B infection. The major factor that fuels the growth of the market are increase in prevalence of hepatitis B infection worldwide. For example, approximately 887,000 deaths due to hepatitis B infection were recorded in 2015 across the globe. However, inherent disadvantages of using recombinant Chinese hamster ovary cell (CHO) to design hepatitis B vaccines restrains the growth of the market. Conversely, increase in government focus to promote (CHO) hepatitis B vaccination for adults and extensive research carried out for the same are expected to offer lucrative opportunities for the market.

The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for

development of pharmaceutical manufacturing segments and rise in R&D activities for drugs. However, the industry also faces challenges such as stringent regulations, high costs of research and development, and patent expirations. Companies need to continuously innovate and adapt to these challenges to stay competitive in the market and ensure their products reach patients in need. Additionally, the COVID-19 pandemic has highlighted the importance of vaccine development and supply chain management, further emphasizing the need for pharmaceutical companies to be agile and responsive to emerging public health needs.
