According to our (Global Info Research) latest study, the global Recombinant Human Hair Keratin Protein market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Recombinant human hair keratin protein is a bioengineered form of keratin, which is one of the primary structural proteins found in human hair. This protein is synthesized using recombinant DNA technology, where human keratin genes are inserted into microorganisms like bacteria or yeast. These microorganisms then produce keratin in large quantities, which is later purified for various uses.
