According to our (Global Info Research) latest study, the global Recombinant Human Serum Albumin market size was valued at US\$ 82.3 million in 2024 and is forecast to a readjusted size of USD 131 million by 2031 with a CAGR of 7.0% during review period.

Recombinant Human Serum Albumin (Rec. HSA) is animal origin free expressed in E.coli without animal or human derived raw materials. It is also free from other contaminating serum proteins.

Recombinant human serum albumin (rHSA) is genetically engineered and derived from a rice-based expression system. It is a highly purified and completely animal-, virus-, and bacteria-free product that was developed as an alternative to plasma-derived HSA, to which it is structurally equivalent.

Global key players of recombinant human serum albumin (Recombinant Human Serum Albumin) include Albumedix, Merck and Ventria (InVitria). The top three manufacturers account for about 88% of the global share. North America is the largest producer of recombinant albumin in the world with about 46% share, followed by Europe and China with 42% and 7% share respectively. North America is the largest market with approximately 59% share, followed by Europe and China with approximately 29% and 6% market share, respectively. In terms of product type, ScrHSA is the largest segment, holding about 91% share. In terms of application, cell culture media is the largest downstream segment with about 73% share; followed by medical supplements.
