## Abstracts

The global Recombinant Humanized Collagen Type III market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Collagen made a tremendous impact in the field of regenerative medicine as a bioactive material. For decades, collagen has been used not only as a scaffolding material but also as an active component in regulating cells' biological behavior and phenotype. However, animal-derived collagen as a major source suffered from problems of immunogenicity, risk of viral infection, and the unclear relationship between bioactive sequence and function. Recombinant humanized collagen provided alternatives for regenerative medicine with more controllable risks.

This report studies the global Recombinant Humanized Collagen Type III production, demand, key manufacturers, and key regions.
