Abstracts

Recombinant PKB/Akt protein is a PKB/Akt protein synthesized from non-natural sources through genetic engineering technology. PKB/Akt protein is an important signal transduction protein that plays a key role in biological processes such as cell proliferation, survival, metabolism, and apoptosis. Through gene cloning and expression technology, the PKB/Akt gene can be introduced into eukaryotic or prokaryotic cells, and then high-purity PKB/Akt protein can be obtained through protein expression and purification technology. Recombinant PKB/Akt proteins usually have the same amino acid sequence and structure as natural PKB/Akt proteins, and therefore have similar biological functions and activities. They are usually used in in vitro experiments, such as enzyme activity determination, protein-protein interaction research, drug screening and structural biology research, etc., to explore the regulatory mechanism and biological function of the PKB/Akt signaling pathway, or as drugs for biomedical research target.

According to our (Global Info Research) latest study, the global Recombinant PKB/Akt Protein market size was valued at US\$ 6 million in 2023 and is forecast to a readjusted size of USD 10.2 million by 2030 with a CAGR of 7.8% during review period.

In recent years, with in-depth research on the role of the PKB/Akt signaling pathway in the occurrence and development of diseases, the demand for recombinant PKB/Akt proteins continues to grow. Especially in the fields of tumors, neurodegenerative diseases, cardiovascular diseases and other fields, recombinant PKB/Akt protein has huge market potential as a research tool and therapeutic target. In addition, the continuous advancement of recombinant protein preparation technology provides strong support for the production of recombinant PKB/Akt protein. Through the optimization of genetic engineering, protein purification and other technologies, the efficient expression

and purification of recombinant PKB/Akt protein can be achieved, improving its quality and stability. Overall, the recombinant PKB/Akt protein market has broad development prospects and huge potential, and is expected to continue to maintain rapid growth in the future.
