According to our (Global Info Research) latest study, the global Recombinant Proteins market size was valued at US\$ 1430 million in 2025 and is forecast to a readjusted size of US\$ 3276 million by 2032 with a CAGR of 12.7% during review period.

Recombinant protein is a manipulated form of protein encoded by recombinant DNA, which has been cloned in a foreign expression system to supports the expression of the exogenous gene. This recombinant DNA construct can be used to manufacture large quantities of useful protein products. The recombinant DNA, usually the cDNA sequence of the target protein, is designed to be under the control of a well-characterized promoter to express the target protein within the chosen host cell to achieve high-level protein expression.

Global key manufacturers of recombinant proteins are Bio-Techne Corporation, Abcam PLC, Merck KGaA, Miltenyi Biotec, Thermo Fisher Scientific, ACROBiosystems, Sino Biological, and others. The top six manufacturers together account for about 50% of the market share, with the largest manufacturer being Bio-Techne Corporation with 10%. In terms of market size, Asia Pacific is the largest consumption market with more than 35% share. In terms of product categories, cytokines hold the largest market share with 25%, followed by hormones and immune checkpoint regulators with 20% and 15% respectively. In terms of applications, biopharmaceutical companies are the top application area, with over 80% of the market share.
