The global Recombinant Proteins market size is expected to reach \$ 2284.2 million by 2029, rising at a market growth of 12.5% CAGR during the forecast period (2023-2029).

Global key manufacturers of recombinant proteins are Bio-Techne Corporation, Abcam PLC, Merck KGaA, Miltenyi Biotec, Thermo Fisher Scientific, ACROBiosystems, Sino Biological, and others. The top six manufacturers together account for about 50% of the market share, with the largest manufacturer being Bio-Techne Corporation with 10%. In terms of market size, Asia Pacific is the largest consumption market with more than 35% share. In terms of product categories, cytokines hold the largest market share with 25%, followed by hormones and immune checkpoint regulators with 20% and 15% respectively. In terms of applications, biopharmaceutical companies are the top application area, with over 80% of the market share.

Recombinant protein is a manipulated form of protein encoded by recombinant DNA, which has been cloned in a foreign expression system to supports the expression of the exogenous gene. This recombinant DNA construct can be used to manufacture large quantities of useful protein products. The recombinant DNA, usually the cDNA sequence of the target protein, is designed to be under the control of a well-characterized promoter to express the target protein within the chosen host cell to achieve high-level protein expression.
