Abstracts

The global Recombinant Streptokinase for Injection market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

The component of recombinant streptokinase for injection is recombinant streptokinase. Recombinant streptokinase combines with plasminogen at a molar ratio of 1:1 to form a complex, and then activates plasminogen into plasmin, which mainly catalyzes thrombus. Matrix fibrin is hydrolyzed, thereby dissolving thrombi and recanalizing blood vessels; at the same time, the thrombolytic effect of recombinant streptokinase is enhanced by the presence of fibrin, so recombinant streptokinase can effectively and specifically dissolve thrombi or blood clots, and can treat thrombosis as the main cause. Diseases with pathological changes. It is clinically used for thrombotic diseases such as acute myocardial infarction.
