Abstracts

Recombinant vaccines are produced using recombinant DNA technology, with the help of a vector. These vaccines stimulate the immune system of an individual and provide immunity against various lethal disease.

These vaccines are safe and have less or no side-effects as compared to conventional vaccines, in the prevention of various diseases such as influenza, cholera, typhoid, and dengue.

Recombinant vaccines are also used in animals for prevention of diseases such as foot and mouth disease, pneumonia and septicemia, and pox disease. Vaccination results in the prevention of disease, by producing antibodies against the protein antigen of pathogenic microorganisms.

Scope of the Report:

This report focuses on the Recombinant Vaccines in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.
