Abstracts

The global Recovered Titanium Products market size is expected to reach \$ 1550.6 million by 2029, rising at a market growth of 8.2% CAGR during the forecast period (2023-2029).

There are many sources of titanium scrap. For example, the titanium scrap produced during the production of sponge titanium, whose upper skin, bottom and sides are contaminated by iron, chlorine, oxygen, nitrogen, and other impurities that do not meet product quality standards, must be disposed of and recycled. In addition, there are also titanium scrap produced during the process of titanium ingot casting, and titanium scrap produced by processing titanium material into titanium products, which are all important sources. Due to a large amount of titanium scrap, comprehensive utilization is promising.

This report studies the global Recovered Titanium Products production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Recovered Titanium Products, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
