The rehabilitation cryotherapy cabin is a kind of equipment that treats the human body through cryogenic freezing technology. It can provide a low temperature environment and expose the patient's body to temperatures below zero degrees Celsius to achieve therapeutic effects. This treatment method is widely used in rehabilitation therapy fields such as sports injuries, orthopedic surgery, and post-traumatic recovery. A recovery cryotherapy chamber usually consists of a sealed room or chamber in which a patient can undergo treatment. During treatment, patients only need to put on special clothing or quilts, then enter the cryotherapy cabin, and be exposed to low temperature environment for a specified period of time. The rehabilitation cryotherapy cabin can reduce pain, reduce swelling, promote wound healing and reduce muscle fatigue through low temperature. It can also enhance immunity and regulate the body's metabolism and circulatory system. This treatment method has been more and more recognized and applied.
