A small animal rectal probe is a medical device of specific size and material, usually equipped with a smooth beaded tip and a stainless steel shaft, which is used to insert into the rectum of small animals (such as rats, mice, etc.) to accurately measure their body temperature. The tip of the probe is usually designed in a smooth bead shape to reduce irritation and damage to the animal's rectal tissue while ensuring the accuracy of the measurement. The probe is usually equipped with a longer connecting wire to connect to the temperature measuring instrument for real-time monitoring and recording.
