Abstracts

According to our (Global Info Research) latest study, the global Rectangular Transfer Valve market size was valued at US\$ 328 million in 2025 and is forecast to a readjusted size of US\$ 500 million by 2032 with a CAGR of 6.2% during review period.

A Rectangular Transfer Valve is a high-vacuum isolation/transfer valve mounted on a rectangular transfer opening in semiconductor, display, PV, and vacuum-coating equipment. Its job is to provide low-leakage, low-particle, fast open/close isolation while allowing wafer or substrate transfer between the load lock, transfer chamber, and process chamber. Typical designs use aluminum or stainless bodies, pneumatic or electric actuation, elastomer or higher-grade seals, and are engineered around particle control, cycle life (often ~0.2M to 3M cycles), serviceability, and corrosion resistance. The direct customers are usually OEM toolmakers rather than fabs themselves; end demand comes from logic, memory, power semiconductor, advanced packaging, display, and thin-film solar production lines. This product should be treated as a subset of semiconductor vacuum valves / vacuum transfer valves and should exclude general angle valves, pendulum valves, pump isolation valves, gas-line valves, standalone actuators, and seals. ASP is highly dispersed and materially above general industrial valves, depending on aperture size, body material, actuation, leak-rate specification, and corrosion/plasma compatibility; gross margin is typically above general industrial valves as well.
