Automotive quick connectors are devices used to connect and disconnect automotive fluid lines such as coolant and oil. These fittings are designed to make quick and easy connections and provide a better seal than traditional threaded fittings, thus reducing maintenance costs. Automotive quick connectors are typically manufactured from plastic materials and feature a locking mechanism to ensure a secure connection. Upstream raw materials for automotive quick connectors include sealing components and plastic materials, while downstream customers include automotive manufacturers and automotive service providers. Currently, the production cost of quick connectors is gradually decreasing, and its average market price is around USD 30 per piece. Currently, the automotive quick connectors market is in a period of steady growth, mainly driven by the overall growth of the automotive industry. With the advancement in automotive technology, especially the popularity of electric and hybrid vehicles, the demand for quick connectors is also increasing.
