Recyclable composite materials refer to those composite materials that can be treated and reprocessed by physical, chemical or mechanical methods after use, thus being converted into reusable raw materials or new products. These materials are usually composed of two or more materials with different properties, such as resin matrix and reinforcing fiber. Through reasonable recycling technology and processes, the components can be effectively separated and reused, reducing environmental pollution, saving resources, and promoting the development of circular economy. Recyclable composite materials have a wide range of applications, including building materials, transportation, energy, chemicals, agriculture, sporting goods, electronic products and infrastructure.
